Passport data curation energizer activity

A little bit of history

Some Findings in geographical coordinates

- Coordinates in the ocean
- Duplicated coordinates
- Low coordinates precision: Coordinates can fall right outside the correct region or country.
- Inverted coordinates sign: Either the latitude, the longitude, or both have the wrong sign.
- Zero coordinates
- Coordinates out of collecting country : Country of collection in the passport data does not match to where the coordinate falls.
- Straight-line pattern in latitude or longitude
- Missing E/W and/or N/S letters and symbols ° or ' or “,
- Lack of Collection Site Information for some accessions.
- Wrong elevation data
- Incomplete Geographical Data

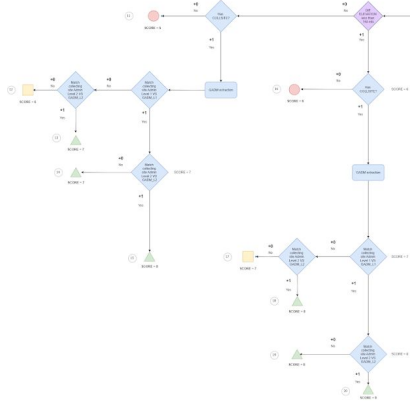

Common_names	Latitude	Longitude
Rochelas	2.9167 ° N	75 ° W
Revoltura	2.9167N	75W
Revoltura	2.9167N	75

Scope

Design and develop tools to facilitate and strengthen the curation of passport data in germplasm bank collections.

How

Leveraging the expertise of curators from ICARDA, CIAT, Bioversity, and CIMMYT, we developed a strategic plan to assess the quality of reported passport data

Three main categories

1. Low number of decimal Places in decimal Lat/Lon
2. Origin country
3. Zero decimal coordinate
4. Coordinate on SEA

Precision

Georeferenced Coordinates

1. Country centroid
2. Province Centroid
3. High pop. density City centroid
4. Institute centroid

Donated materials
Market accessions

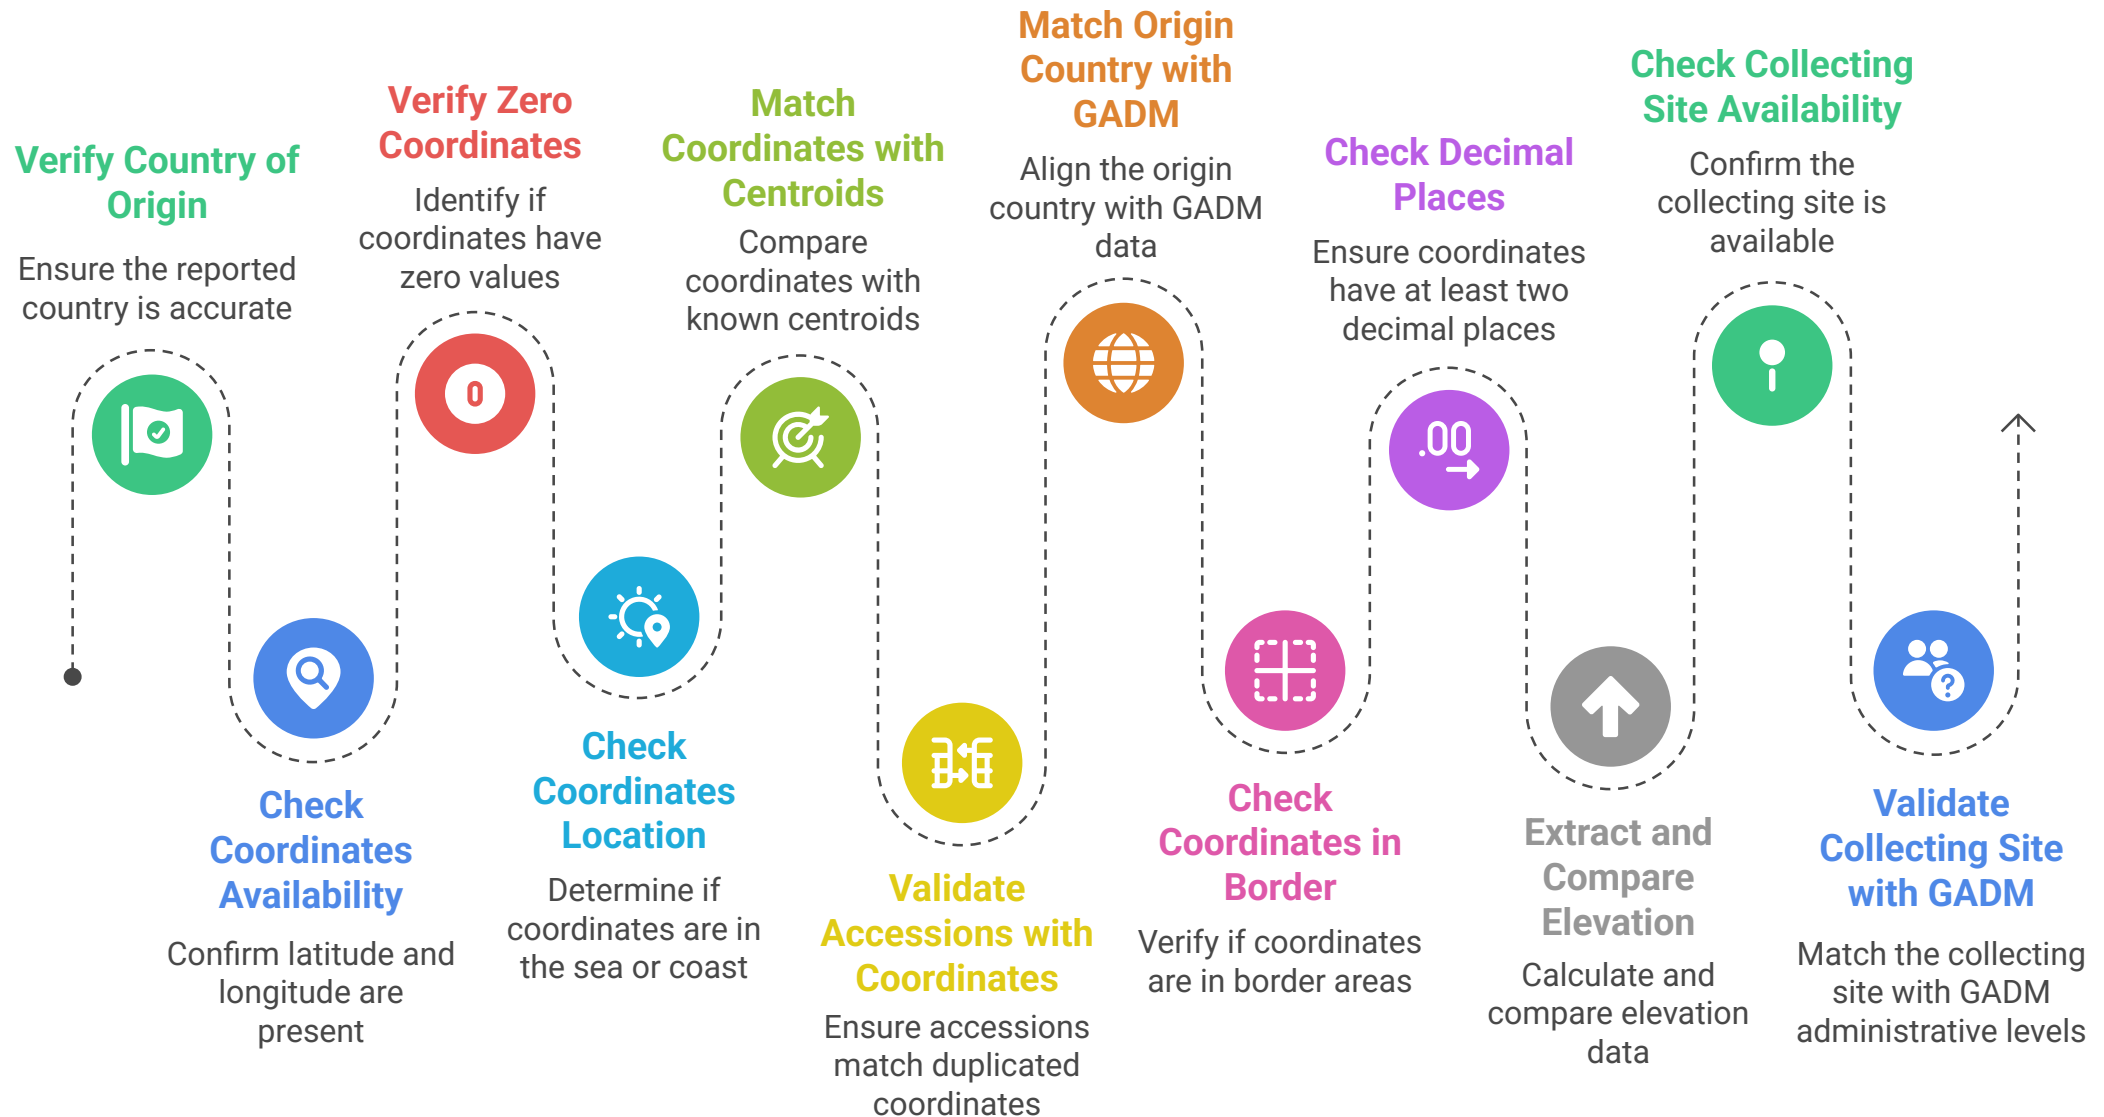

Collecting site description

1. Administrative level 1 Miss-match
2. Administrative level 2 Miss-match

Required Fields

1. **ORIGCTY**: country of origin
2. **ELEVATION**: elevation reported in meters
3. **INSTCODE**: Institution code (FAO WIEWS)
4. **DECLATITUDE**: decimal degree latitude
5. **DECLONGITUDE**: decimal degree longitude
6. **ACCENUMB**: accession unique identifier
7. **COLLSITE**: description of the collecting site

Passport Data Validation Process

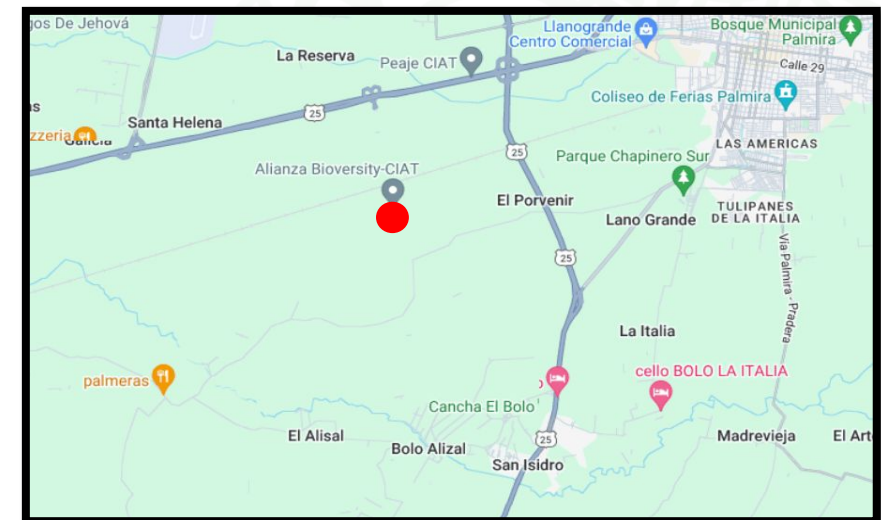

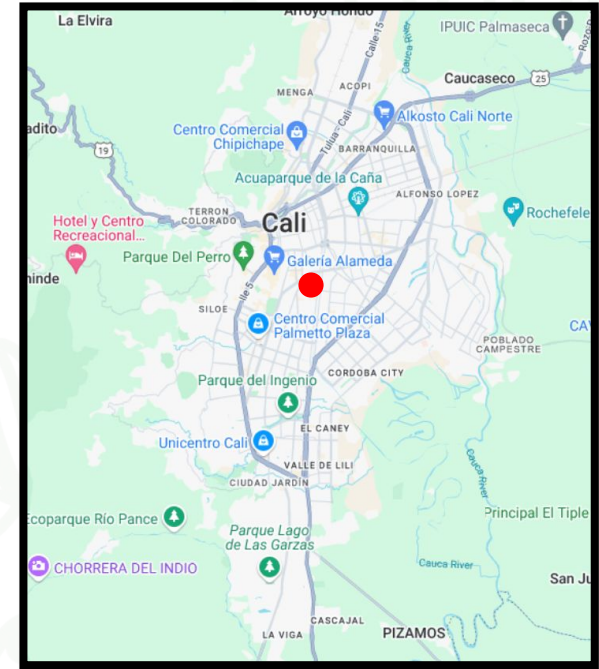

Verification fields

1. Check if accession has origin country.
- 2. Check if coordinate has values of Zero.**
- 3. Check if coordinate falls on sea.**
- 4. Check if coordinate was georeferenced to a country, county, city and institution central coordinate.**
5. Check if more than 25 different accession have the same coordinate.
- 6. Check if country of origin matches coordinate country.**
7. Check if coordinate has more than 2 decimal places.
8. Check if difference between ELEVATION and STRM elevation is less than 150 meters.
9. Check if COLLSITE is reported
10. Check if coordinate GADM administrative levels 1 and 2 matches COLLSITE description

Check if coordinate was georeferenced to a country, county, city and institution central coordinate

- Accession does not have coordinate, but still have COLLSITE description, nevertheless COLLSITE description lacks precision e.g:
 - Colombia
 - Cali
 - CIAT
- Through a geolocation process, missing coordinates were determined by using either the central coordinate (centroid) of the city or the location of the institution/genebank.

Check if coordinate has more than 2 decimal places.

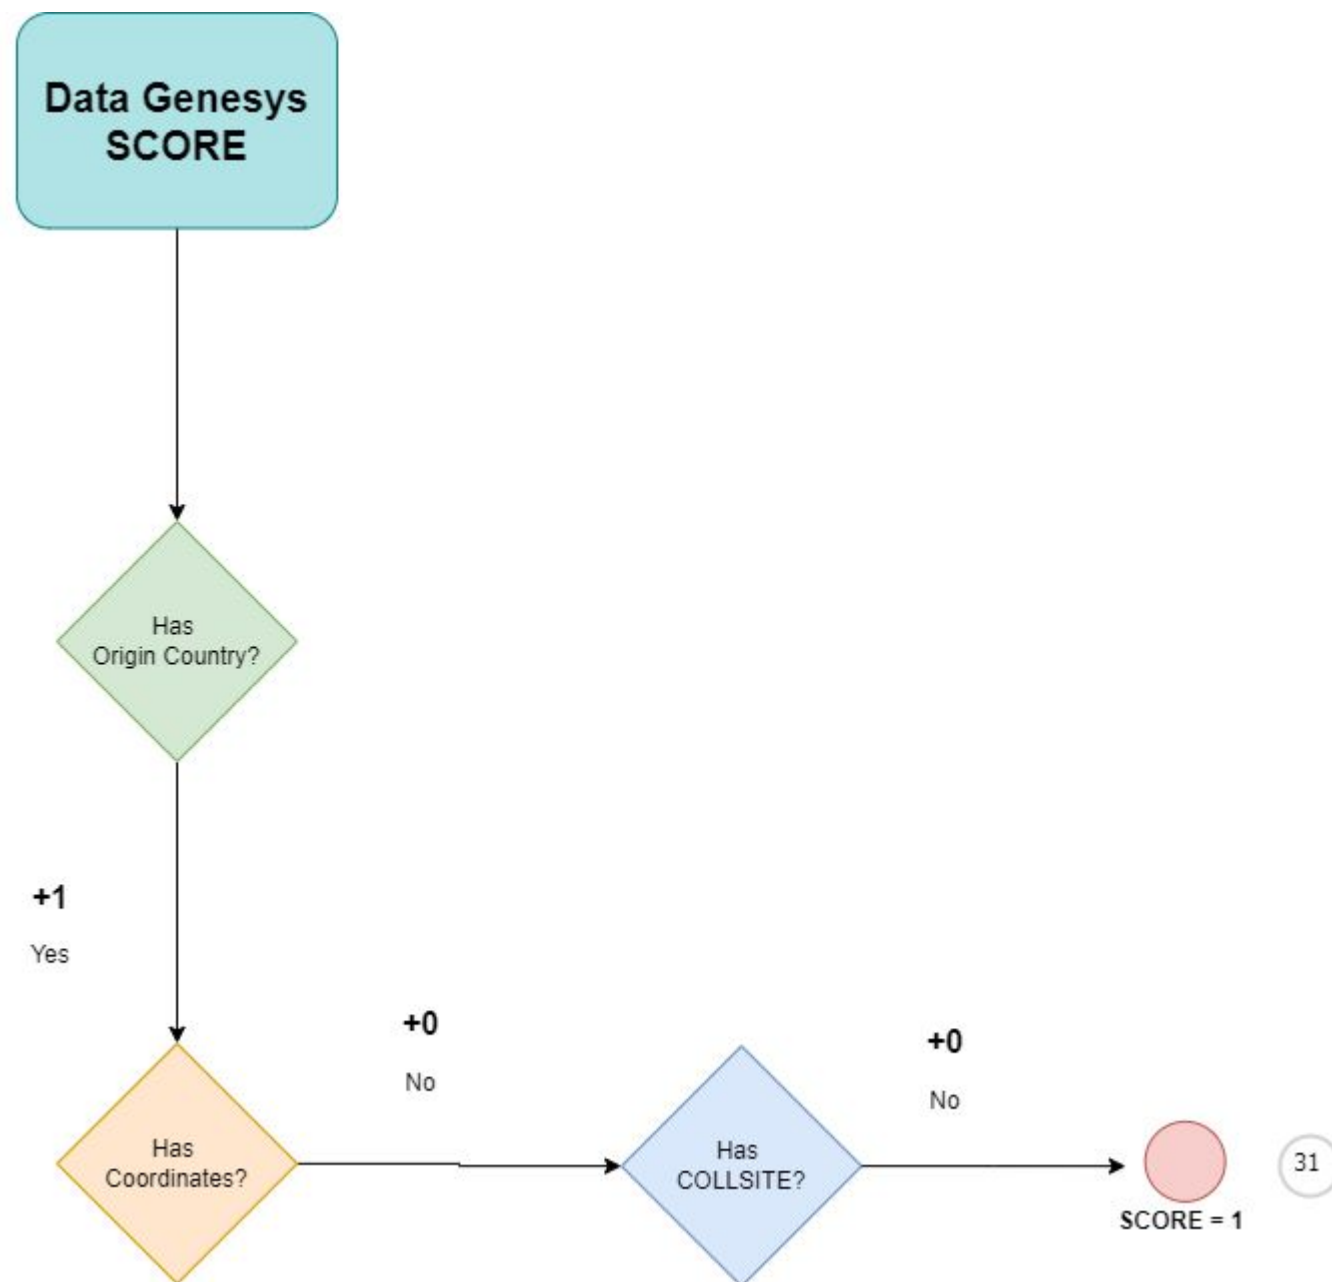

- No decimals in coordinate could represent an uncertainty of 111.1 kilometers e.g., lon = 76; lat = 2
- One single decimal place in coordinate could represent an uncertainty of 11.1 kilometers

Check if coordinate GADM administrative levels 1 and 2 matches COLLSITE description

- Coordinate: Lat:3.488 Lon: -76.45
- GADM:
 - Level 0: Colombia
 - Level 1: Valle del cauca
 - Level 2: Cali
- COLLSITE: 2 Km east of Cali, valle del cauca, colombia. (level 1 and level 2 matched)
- COLLSITE: **Colombia** (No match)

Hierarchy of Variables

Country
of origin

1. Information available (Y/N).

Coordinates

1. Zero coordinates (Lat or Lon).
2. Sea or border sea coordinates.
3. Check centroids.
4. Coordinates has less than 2 decimal places.
5. Coordinates country (GADM) different that origin country

Elevation

1. Diff ELEVATION greater than 150 mts (Y/N).

Site of
collection

1. Information available (Y/N).
2. Match collecting site Admin L1 VS GADM_L1.
3. Match collecting site Admin L2 VS GADM_L2.

Why does this matter for conducting a gap analysis ?

Quality score Dashboard

(Ecuador, Morocco and Pakistan)

<https://bit.ly/PDFFC>

(Colombia, Kenya and Zambia)

Examples

ACC_ID: INIAP-ECU-15376

Quality: **Low**

Level of improvement: **Moderate hard to curate**

Country of origin

1. Information available ☐ Yes
ECU (Ecuador)

Coordinates
Lat 1.672
Lon-80.2989

1. Zero coordinates (Lat or Lon) ☐ No
2. Sea or border sea coordinates ☐ **Yes**
3. Check centroids ☐ No
4. Coordinates less than 2 decimal places No
5. Coordinates country (GADM) different that origin country ☐ NO

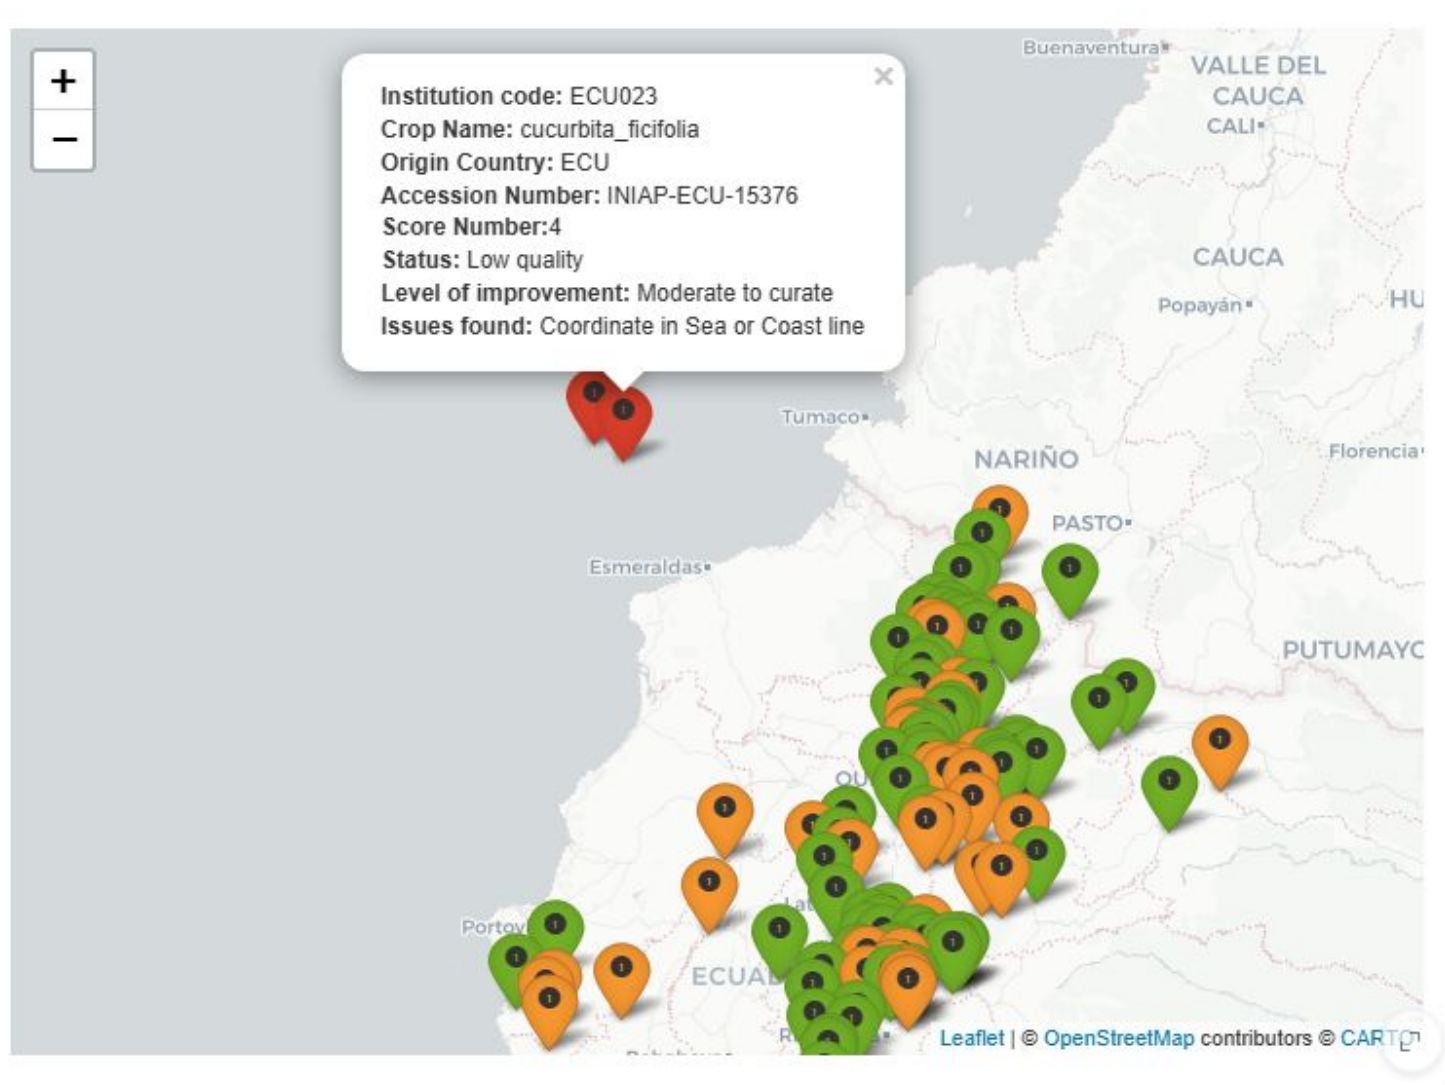

Elevation

1. Diff ELEVATION greater than 150 mts No

Collection site

1. Information available ☐ Yes

Imbabura, Cotacachi, Imantag

ACC_ID: INIAP-ECU-12363

Quality: **Moderate**

Level of improvement: **Moderate hard to curate**

Country of origin

1. Information available ☐ Yes
ECU (Ecuador)

Coordinates

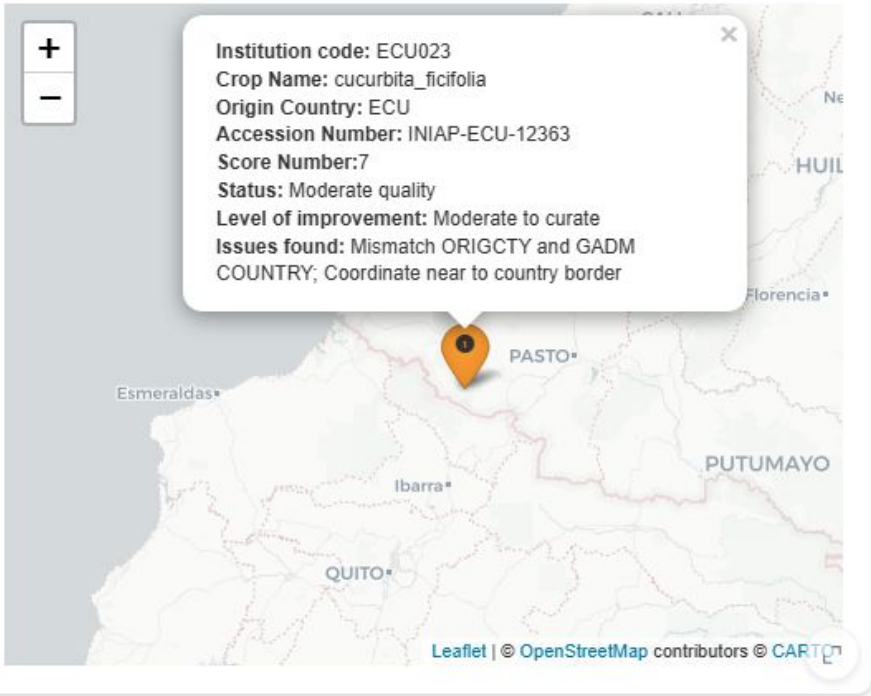

Lat 1.0063
Lon -78.01666

1. Zero coordinates (Lat or Lon) ☐ No
2. Sea or border sea coordinates ☐ No
3. Check centroids ☐ No
4. **Coordinates country (GADM) different that origin country**
☐ **Yes**
COL

5. **Country border coordinates**

Site of collection

1. Information available ☐ Yes
Ambuquí, Ibarra, Imbabura

Level of improvement: **Moderate hard to curate**

Country of origin

1. Information available ☐ Yes
ECU (Ecuador)

Coordinates
Lat 10.3
Lon -64.4

1. Zero coordinates (Lat or Lon) ☐ No
2. Sea or border sea coordinates ☐ No
3. Check centroids ☐ No
4. **Georeferenced to a centroid**

Collection site

1. Information available ☐ Yes
San Lucas,Loja,Loja

ChatGPT 5

cual es el centroide de la ciudad de loja ecuador

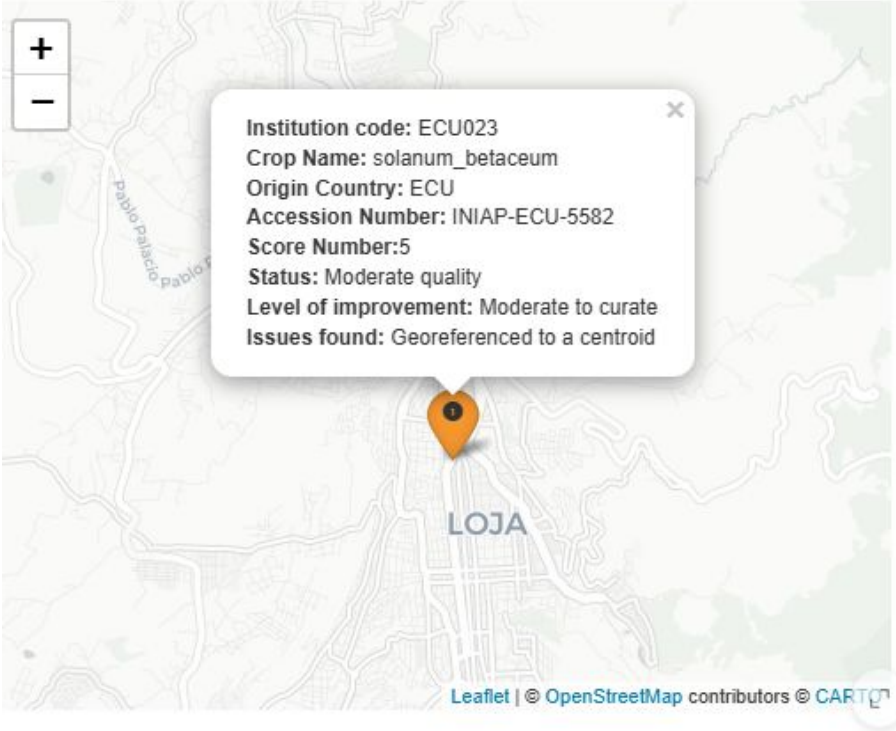

El centroide aproximado de la ciudad de Loja, Ecuador (coordenada decimal) es:

Latitud: -3.993130°

Longitud: -79.204220°

Date and Time +2
